1 Purpose

This document summarizes the currently available market performance and user engagement data for Pokoin, PKN, and wPKN. It is prepared as a supporting document for exchange, partner, and due-diligence discussions.

Pokoin is currently in an early infrastructure and market-formation stage. Therefore, some metrics are live and verifiable, while broader marketplace analytics such as sustained trading volume, recurring active users, and paid analytics subscriptions are planned product metrics rather than mature historical figures.

2 Public Verification Links

Area	Public URL
Website	https://pokoin.com
Wallet	https://pokoin.com/wallet
Explorer	https://explorer.pokoin.com
Scan UI	https://pokoin.com/scan

Area	Public URL
RPC endpoint	https://rpc.pokoin.com/rpc
Node health	https://rpc.pokoin.com/health
wPKN logo	https://explorer.pokoin.com/wpkn/logo.png
wPKN reserve manifest	https://explorer.pokoin.com/wpkn-reserve.json

3 Current Chain Performance Snapshot

Snapshot date: 2026-05-16.

Metric	Current value	Source
Chain	PokoinPoS	Project metadata
Native asset	PKN	Project metadata
Chain ID	26062026	Public network config
Latest height	378	rpc.pokoin.com/chain/status
Finalized height	377	rpc.pokoin.com/chain/status
Finality depth	1 block	rpc.pokoin.com/chain/status
Public transactions observed	13	rpc.pokoin.com/chain/status
Mempool depth	0	rpc.pokoin.com/chain/status
Authorized validators	2	rpc.pokoin.com/chain/validators
Connected peer count	1	rpc.pokoin.com/chain/status
Validator stake observed	1,003,780 PKN	rpc.pokoin.com/chain/status
Mined blocks observed by current node	5	rpc.pokoin.com/chain/status
Accepted blocks observed by current node	5	rpc.pokoin.com/chain/status

4 wPKN Market and Liquidity Snapshot

wPKN is the wrapped representation of PKN on BNB Smart Chain.

Metric	Current value
Wrapped token	Wrapped PKN
Symbol	wPKN
Chain	BNB Smart Chain
Contract	0x91A17E2bddfF839078BD395482B38e4AC15276f4
Total supply	2,000,000 wPKN
Reserve model	1 native PKN reserved for every 1 wPKN minted
Reserved native amount	2,000,000 PKN
Native treasury	0x74466c3a204429b22ce8558f3f18f3c59f67fcb3
PancakeSwap pair	0x86294c008542C2707B9f67e3E4BA2d03B7bF7451
Initial pair	wPKN/BNB
Initial liquidity	2,000 wPKN and 0.0015 BNB
Liquidity transaction	0xd4d1d40c31d1efff2be4b6e0d29d54877a5732709a95648c01860a6

5 Trading Volume Status

PKN and wPKN are in an early market-formation phase. Current confirmed market activity includes:

- wPKN contract deployed on BNB Smart Chain.
- PancakeSwap wPKN/BNB pool created.

- Initial liquidity added to support public price discovery.
- Public reserve manifest available for verification.
- Public explorer and wallet surfaces available for user onboarding.

Historical trading volume is not yet presented as a mature recurring metric. The project should begin publishing monthly trading-volume reports once the market has sufficient activity and reliable data collection.

Recommended monthly trading report fields:

Field	Purpose
Monthly wPKN trading volume	Measures external market activity
Monthly PKN native transfer count	Measures chain usage
Monthly unique active wallets	Measures user engagement
Marketplace card sales volume	Measures product-market usage
Tokenized card count	Measures core utility adoption
Average transaction size	Helps understand usage quality
Repeat buyer/seller count	Measures marketplace retention
Liquidity depth	Measures trading friction
Reserve coverage	Confirms wPKN backing discipline

6 User Engagement Metrics

Current engagement surfaces:

- Pokoin website.
- Pokoin Wallet.
- PokoinScan / explorer.
- RPC and chain API.
- wPKN reserve proof.
- PancakeSwap pool.
- Planned card tokenization and marketplace flow.

Current measurable engagement indicators:

Indicator	Current status
Public explorer live	Yes
Wallet route live	Yes
RPC live	Yes
Validators live	Yes, 2 authorized validators
wPKN reserve manifest live	Yes
BNB Smart Chain token live	Yes
Marketplace analytics	Planned
Instant Pokemon card tokenization	Planned / product direction
User-level retention cohorts	Not yet mature
Paid analytics subscriptions	Planned

7 Market Analytics Product Direction

Pokoin's analytics layer is planned to focus on collectible-card markets, starting with Pokemon cards. The goal is to provide better data than fragmented legacy sources by making card events trackable and structured.

Planned analytics:

- Tokenized card count by set, rarity, condition, and owner.
- Price history per card.
- Comparable sale references.

- Marketplace bid/ask spreads.
- Card liquidity scoring.
- Portfolio valuation for collectors.
- Ownership and transfer history.
- wPKN liquidity and reserve monitoring.
- Native PKN usage and wallet activity.

These metrics can become stronger over time as tokenized-card inventory and marketplace transactions increase.

8 Supporting Evidence

8.1 Infrastructure evidence

Pokoin currently has the following public infrastructure:

- Public website and wallet.
- Public scan/explorer UI.
- Public RPC endpoint.
- Live node health endpoint.
- Validator visibility.
- wPKN contract and PancakeSwap pool.
- Reserve manifest for wrapped supply backing.

8.2 Product evidence

The project has implemented or prepared:

- Native PKN chain.
- Public wallet route.
- Explorer/scan page with chain-facing metrics.
- wPKN reserve proof.
- Token logo and metadata assets.
- Dockerized peer deployment model.
- Documentation for node operators and public network metadata.

8.3 Market evidence

Market evidence is early but concrete:

- wPKN exists on BNB Smart Chain.
- wPKN/BNB pair exists on PancakeSwap.
- Initial liquidity has been added.
- Public reserve amount is documented.
- Public URLs are stable for third-party token metadata.

9 Next Reporting Milestones

Pokoin should produce recurring market-performance reports once sufficient data is available.

Period	Report focus
Month 1	Baseline users, wallets, tokenized cards, transfers
Month 3	Early cohort retention, card listings, marketplace tests
Month 6	Trading volume, liquidity depth, active wallets, paid analytics interest
Month 12	Marketplace GMV, tokenized-card coverage, partner integrations

10 Notes and Limitations

- Pokemon is a third-party brand. Pokoin should not imply official affiliation unless a license or partnership is obtained.
- Trading data is early and should not be overstated.
- Tokenomics and vesting are not finalized.
- No passive token-holder revenue or yield should be promised unless formally implemented and legally reviewed.
- Public-chain and marketplace data should be independently verified before external submission.

11 Conclusion

Pokoin has live infrastructure and early market foundations: a native PKN chain, public explorer, wallet, validator network, wPKN on BNB Smart Chain, reserve manifest, and PancakeSwap pool. The next step is to convert this foundation into measurable market performance through instant card tokenization, collectible market analytics, marketplace transactions, active wallets, and recurring monthly reporting.
